(54) Title: COMMUNICATION PAD MOUNTING STRUCTURE OF REFRIGERATOR

(57) Abstract: There is a problem in that it is inconvenient to use a conventional communication pad (17) since a user cannot diversely adjust a direction of the communication pad. The present invention relates to a communication pad mounting structure of a refrigerator. In the present invention, a front of a door (51) of a refrigerator is formed with a seating space (53). The upper and lower portions of the seating space (53) are formed with slots (54) elongated from side to side, respectively. The holder (57) for supporting a communication pad (55) is mounted in the seating space (53) tiltable from side to side. To this end, there are provided a pair of links (58) and (59), wherein an end of the links is connected to the slot to pivot and move along each slot (54), and the other end of each of the links is pivotally connected to a side of each of the upper and lower surfaces of the holder (57). According to the present invention with such a structure, the communication pad which is supported by the holder can be tilted to a desired position according to a position of the user.
